

Escalation and Exception Handling Procedures

1. Purpose

This document defines when an onboarding case must be escalated to a human reviewer rather than progressed automatically by the onboarding agent.

2. Automatic Escalation Triggers

A case is automatically escalated when a sanctions or PEP screening result returns a Hit, when a submitted document fails validation twice, or when a case remains in the same stage for more than 14 days without progress.

3. Escalation Routing

Screening-related escalations route to compliance. Document-related escalations route to the onboarding analyst assigned to the case.

4. Human-in-the-Loop Requirement

No case with an unresolved escalation may be advanced to the Decision stage without an explicit resolution recorded by the assigned human reviewer.

5. Resolution Recording

Every escalation resolution must record who resolved it, the outcome and the rationale, so the decision remains auditable.
