

Trading Account Provisioning Procedures

1. Purpose

This document describes how a TradingAccount is provisioned once an onboarding case is approved and moves into the Setup stage.

2. Product Line Selection

A TradingAccount is opened against a single product line: Commodities, FX, Rates or Equities. Customers trading multiple product lines are provisioned with one TradingAccount per product line.

3. Account Status Lifecycle

A TradingAccount moves through Active, Suspended and Closed statuses. Suspension is used for temporary holds such as a pending periodic review; closure is permanent.

4. Linkage to Case

Every TradingAccount references the CaseID of the onboarding case that authorised it, providing traceability back to the original KYC decision.

5. Ready-to-Trade Confirmation

A TradingAccount cannot be set to Active status until the onboarding case is marked ReadyToTrade.
