

Environmental and Safety Compliance Policy

1. Environmental Responsibility

Suppliers must adhere to all applicable environmental laws and regulations. This includes proper waste disposal, emissions control, and resource conservation efforts. Suppliers are encouraged to implement sustainable practices reducing environmental impact.

2. Safety Standards Requirements

All suppliers must comply with OSHA safety standards and provide evidence of employee training programs. Injury rates exceeding industry averages require corrective action plans. Safety inspections are conducted at supplier facilities at least annually.

3. Hazardous Materials Handling

Handling, storage, and transport of hazardous materials must follow strict protocols including labeling, containment, and emergency response planning. Documentation for hazardous materials must be provided with each shipment.

4. Incident Reporting and Investigation

Suppliers must report any environmental or safety incidents within 24 hours to the designated contact. Investigations must be completed within 10 business days detailing root causes and planned corrective actions. Incident records are maintained for five years.

5. Auditing and Compliance Reviews

Periodic audits assess compliance with environmental and safety requirements. Non-compliance findings result in corrective action notices and follow-up audits. Repeated violations can lead to contract termination or suspension.

6. Employee Training and Awareness

Suppliers must provide regular training on environmental and safety topics to all employees. Training records must be available for review. Awareness programs promote a culture of safety and environmental stewardship.

7. Emergency Preparedness Plans

Suppliers are required to maintain emergency response plans addressing spills, fires, and other hazards. Plans must be tested annually with documented drills. Coordination with local emergency services is expected.

8. Continuous Improvement Initiatives

Environmental and safety performance metrics are tracked quarterly. Suppliers are encouraged to propose improvements and adopt best practices. Incentives may be provided for demonstrated improvements reducing risks and impacts.
