

Customer Account Setup Standards

1. Purpose

This document defines the standards for creating CustomerAccount records once an onboarding case reaches the Setup stage.

2. Account Hierarchy

A CustomerAccount may reference a ParentAccountID to represent a group structure. Every account must resolve to exactly one ultimate parent.

3. Currency Assignment

Each CustomerAccount is assigned a single settlement currency at creation, recorded as an ISO currency code. A customer requiring multiple settlement currencies is given one account per currency.

4. Naming Convention

CustomerAccountName should reflect the business unit or product line the account supports so downstream reporting can group accounts consistently.

5. Approval Requirement

No CustomerAccount is created until the KYC decision for the associated onboarding case is recorded as Approved.
