

Sanctions and PEP Screening Procedures

1. Purpose

This document defines how sanctions and politically exposed person (PEP) screening is performed and how results are recorded on the KYCAssessment record for a case.

2. Screening Scope

Screening covers the client entity, all identified Ultimate Beneficial Owners, authorised signatories and any affiliates identified during entity resolution.

3. Result Categories

Each screening check returns one of three results: Clear, Hit, or PendingReview. A Hit does not automatically fail the case; it requires analyst review to confirm or dismiss as a false positive.

4. Handling a Hit

A confirmed sanctions Hit against the client entity results in immediate case rejection. A confirmed PEP Hit does not reject the case but requires enhanced due diligence and senior approval before proceeding.

5. Rescreening

All active customers are automatically rescreened against updated sanctions and PEP lists on a nightly batch cycle, independent of the onboarding case lifecycle.
