

Delivery Operations Manual

1. Scheduling Requirements

All delivery requests must be submitted at least 48 hours before the requested delivery date. Rush orders may be accommodated with a 25% surcharge, subject to vehicle availability. Deliveries scheduled for weekends or holidays require 72 hours advance notice and incur an additional 15% weekend/holiday fee. Cancellations made less than 24 hours before scheduled pickup will be charged a 50% cancellation fee.

2. Vehicle Assignment Policy

Vehicles are assigned based on cargo weight, volume, and delivery distance. Standard vans handle loads up to 500kg within a 50km radius. Medium trucks are deployed for loads between 500kg and 2000kg or distances exceeding 50km. Heavy-duty trucks are reserved for loads over 2000kg or specialized cargo requiring climate control or hazardous materials handling certification.

3. Driver Responsibilities

Drivers must verify delivery documentation, secure cargo properly, and comply with safety regulations. Mandatory vehicle inspections must be conducted at the start and end of each shift. Drivers must report any incidents or delays immediately to the control center.

4. Delivery Timeframes and Windows

Deliveries are scheduled within two-hour windows agreed upon with customers. Missed time windows require rescheduling and incur penalties unless caused by uncontrollable events. Standard delivery times are between 7 AM and 7 PM Monday through Saturday.

5. Emergency Procedures

In case of accidents or vehicle breakdowns, drivers must notify the logistics manager immediately and follow established safety protocols. Arrangements for alternate transport or cargo transfer must be initiated within one hour. Incident reports are completed within 24 hours.

6. Documentation and Reporting

Delivery manifests, proof of delivery, and customer acknowledgments must be collected and uploaded into the logistics system within 12 hours of delivery completion. Discrepancies or damages must be documented with photos and descriptions.

7. Vehicle Maintenance Schedule

All vehicles undergo preventive maintenance every 5,000 km or three months, whichever comes first. Maintenance includes brake checks, oil changes, and tire inspections. Logs are maintained and reviewed monthly by fleet management.

8. Key Performance Indicators

Delivery performance is measured by on-time rate, damage incidents, and customer satisfaction scores.

Targets include 95% on-time deliveries and less than 0.5% damage rate. KPI reports are generated weekly and reviewed with operations teams.
