

Data Quality Validation Rules for Customer Records

1. Purpose

This document defines the data quality rules applied to Customer, Location and CustomerAccount records created during onboarding.

2. Required Fields

CustomerID, CustomerTypeID, FirstName or trade name, and PrimaryEmail or PrimaryPhone are mandatory fields that must be populated before a case can progress past Intake.

3. Format Validation

PrimaryEmail must match a valid email format. PrimaryPhone and SecondaryPhone must be validated against the expected format for the customer's registered country.

4. Address Validation

Location records must resolve to a valid combination of City, StateID, ZipCode and CountryID. Addresses that cannot be validated are flagged for manual correction.

5. Duplicate and Consistency Checks

CustomerTradeName periods must not overlap for the same CustomerID, and every CustomerAccount must reference a CustomerID that exists in the Customer table.
