

Client Onboarding Process Overview

1. Purpose

This document describes the end-to-end onboarding process used to bring a new client from initial intake to ready-to-trade status. It applies to Commodities and Global Markets business lines and is used by Relationship Managers, onboarding analysts and the onboarding agent.

2. Process Stages

Every onboarding case moves through five stages: Intake, Screening, DocumentCollection, Decision and Setup. A case cannot move to the next stage until the exit criteria for the current stage are met and recorded against the case.

3. Case Ownership

Each onboarding case is assigned a single Relationship Manager who is accountable for the case from intake through to ready-to-trade. The Relationship Manager may delegate document collection tasks but retains approval accountability.

4. Target Cycle Time

The target cycle time from case opening to ready-to-trade is 21 calendar days for a standard risk case and 45 calendar days for a high-risk case requiring enhanced due diligence.

5. Roles

Front office raises the case, middle office performs screening, financial review and document validation, and back office completes account setup once the KYC decision is approved.
